Data Engineer | Python & SQL

SUMMARY

Data Engineer-track MCA student who builds pipelines end-to-end in Python and SQL: ingestion from live APIs, validation, PostgreSQL storage, Airflow orchestration, and analytics dashboards. Built an hourly, Dockerized ELT pipeline on live USGS earthquake data and a multi-source pricing pipeline with a normalized PostgreSQL schema. Strong in relational modeling and data quality; hands-on with Docker, Apache Airflow, dbt, Flask, and Streamlit. Seeking an entry-level / Associate Data Engineer role or internship.

SKILLS

Languages: Python, SQL, Java, HTML

Data Engineering: ELT/ETL pipelines, pipeline orchestration, data validation & quality monitoring, data modeling, relational schema design, ORM (SQLAlchemy)

Databases: PostgreSQL, MySQL, Oracle

Libraries: Pandas, NumPy, Matplotlib, BeautifulSoup, Requests, Jinja2

Frameworks/Tools: Flask, Streamlit, Git, GitHub, CustomTkinter

Tools: Docker, Apache Airflow, dbt

EDUCATION

Master of Computer Applications *07/2025 - Present*

Bharati Vidyapeeth's IMRDA, Sangli

Bachelor of Computer Applications (BCA) *06/2022 - 06/2025*

Bharati Vidyapeeth's IMRDA, Sangli • GPA: 9.1 / 10.0

CERTIFICATIONS & COURSEWORK

- Data Engineering for Beginners – freeCodeCamp : Docker, PostgreSQL, dbt, Apache Airflow fundamentals
- Big Data Computing – NPTEL (in progress)

PROJECTS

Disaster Intelligence Platform (DIP) *08/2026 - 10/2026*

Python | PostgreSQL | Apache Airflow | Docker | Flask | Streamlit

- Built an ELT pipeline that ingests earthquake data from the USGS feed, validates records, and loads raw data into PostgreSQL before transformation
- Implemented data validation, South Asia geographic filtering, and insert/update (upsert-style) handling to maintain data quality and avoid duplicate processing
- Orchestrated Dockerized extraction and transformation tasks with an hourly Apache Airflow DAG
- Added data quality monitoring and earthquake analytics, served through a Streamlit dashboard backed by Flask API endpoints

Price Tracker Pro *02/2026 - 04/2026*

- Built an end-to-end data pipeline that scrapes, cleans, and stores multi-store pricing data (Amazon, Flipkart, TataCliq, Myntra) into a normalized PostgreSQL schema via SQLAlchemy ORM
- Designed and maintained a relational data model to track users, products, and historical price records at scale
- Built a Flask backend with a real-time analytics dashboard surfacing price trends, savings statistics, and charts
- Implemented a rules-based alerting system that flags price drops and stock changes from incoming data
- Added secure authentication with session management for multi-user access

AWARDS

Smart India Hackathon – Internal Round Participant, Bharati Vidyapeeth's IMRDA
